Yardarm Holster Aware™ Sensor

Holster Sensor

The Holster Aware Sensor detects whether a handgun has been removed from or inserted into a holster. The device works with many public safety Internet of Things (IoT) applications and is interoperable with body-worn cameras from many leading manufacturers.

The sensor continuously analyzes the presence of the firearm within the holster to create removal and insertion events. As events are detected, this information is transmitted via fully secured, AES encrypted Bluetooth Smart® wireless technology to any Bluetooth enabled data hub such as a smartphone, land mobile radio, or directly to other Bluetooth enabled devices.

Realtime data from the sensor can be used to deliver event alerts to nearby officers, an E911 dispatch center, or to communicate with other devices for applications such as auto-activation of body worn cameras.

The sensor is easily installed onto approved holsters using 3M™ VHB™ adhesive.

Sensor installed on Holster

Specifications

Dimensions (LxWxH in inches)	2.35 x .85 x .57
Weight	10 g
Storage Temperature	(> 60 day storage) 15 to 35 °C
Operational Temperature	-10 to 60 °C
Charging Temperature	0 to 45 °C
Battery Size	62 mAh
Charging	Standard Micro USB at 10mA. Full charge in less than 8 hours.
